STRICTLY CONFIDENTIAL — COMMERCIAL-IN-CONFIDENCE

RAYTHEON (RTX CORPORATION)

Aerospace/Defense — Fortune Global Enterprise

REQUEST FOR PROPOSAL

Enterprise AI Operating System (EOS)

AI-Led Operating Model Transformation • Tech Debt Reduction

Advisory • Centre of Excellence • Platform Modernization

RFP Reference	RTX-EOS-RFP-2026-0111
Issuing Entity	Raytheon (RTX Corporation) — Digital & Technology Division
Procurement Lead	VP Procurement & Contracts, Raytheon (RTX Corporation)
Contract Structure	Fixed Price + Outcome-Based + T&M Innovation Streams
RFP Issue Date	March 15, 2026
Orientation	March 19, 2026 — Virtual
All Submissions	April 15, 2026 — 11:59 PM IST — Digital Submission
Orals & Defense Day	April 18, 2026, Kaar Infinite ALM Summit — In-Person India
Contract Award Target	Apr 19, 2026
Submission Platform	Kaar Infinite Portal

All Submissions are digital-only via the Kaar Infinite Portal. By accessing this RFP, bidders accept the NDA terms executed with Raytheon (RTX Corporation).

DOCUMENT CONTROL & DISTRIBUTION

Version	Date	Author	Change Description
0.1	Feb 20, 2026	Digital Strategy Office	Initial requirements gathering
0.5	Mar 1, 2026	Procurement + CTO + Legal	Internal stakeholder review
0.9	Mar 7, 2026	CEO + CFO + CTO Board Sign-off	Executive approval
1.0	Mar 15, 2026	VP Procurement	Official release to pre-qualified bidders

Classification: CONFIDENTIAL. Distribution restricted to designated proposal teams of pre-qualified bidders only.

Portal Access: Login credentials for the Kaar Infinite Portal will be issued to each pre-qualified bidder's nominated Pursuit Leader within 24 hours of RFP release.

1. Introduction & Context

1.1 About Raytheon (RTX Corporation)

RTX Corporation (formerly Raytheon Technologies) is one of the world's largest aerospace and defense companies, operating through three major segments: Collins Aerospace (avionics, aerostructures, interiors), Pratt & Whitney (aircraft engines), and Raytheon (missiles, defense electronics, cybersecurity). RTX serves commercial aerospace, military, and government customers.

Headquarters	Arlington, Virginia, United States
Annual Revenue	$75+ billion (USD)
Employees	185,000+ direct; 60,000+ contractors
Production Units	500+ manufacturing and R&D facilities across 30+ countries
Products	Aircraft engines (Pratt & Whitney GTF, F135), missiles and defense systems (Patriot, AMRAAM, Tomahawk), avionics and sensors (Collins Aerospace), cybersecurity solutions, satellite communications, air traffic management systems

ERP Landscape	SAP ECC 6.0 (multiple instances from legacy companies), Oracle EBS (Raytheon legacy), planned S/4HANA consolidation, SAP Ariba, ITAR-compliant procurement systems
OT/IoT Landscape	DCS/MES across 500+ facilities, CNC machining centers, additive manufacturing, composite layup automation, engine test cells (Pratt & Whitney), missile assembly automation, cleanroom environments, 250,000+ instrument tags
Current IT Landscape	PLM (Siemens Teamcenter, PTC Windchill), Salesforce CRM, Workday HR, ServiceNow ITSM, custom defense program management tools, classified networks (SIPR/JWICS), 500+ standalone applications, SAP Defense & Security module, MES (Siemens, Rockwell)
Current AI Maturity	Level 2 (Experimenting): AI pilots in predictive maintenance for Pratt & Whitney engines, computer vision for quality inspection, and NLP for contract analysis; defense/classified environment constraints limit AI deployment; no unified enterprise AI operating system
Strategic Driver	Post-merger synergy realization (UTC-Raytheon); defense modernization; commercial aerospace recovery; digital engineering transformation; ITAR/classified AI governance; supply chain resilience post-pandemic

1.2 Problem Statement

Raytheon (RTX Corporation) faces the following critical challenges that this RFP seeks to address:

- **Technology Fragmentation:** 500+ standalone applications with limited integration. Data trapped in silos across PLM (Siemens Teamcenter, PTC Windchill), Salesforce CRM, Workday HR, ServiceNow ITSM, custom defense program management . No single source of truth.
- **Massive Technical Debt:** Multiple SAP ECC and Oracle EBS instances from UTC-Raytheon merger — S/4HANA consolidation planned. 600+ custom programs across defense, engine, and avionics systems. Maintenance costs consuming 62% of IT budget, leaving only 38% for innovation.
- **OT/IT Disconnect:** 250,000+ tags across 500+ facilities with classified/unclassified boundary challenges disconnected from enterprise AI.
- **No AI Operating Layer:** Level 2 (Experimenting): AI pilots in predictive maintenance for Pratt & Whitney engines, computer vision for quality inspection, and NLP for contract analysis; defense/classified environment constraints limit AI deployment; no unified enterprise AI operating system. Disconnected AI POCs with no path to production. No AI governance. No model lifecycle management. No enterprise AI platform.
- **Manual Decision-Making:** Production scheduling, quality prediction, maintenance planning, supply chain optimization, and commercial pricing all rely on manual analysis and tribal knowledge.
- **Regulatory Pressure:** ITAR (International Traffic in Arms Regulations); EAR (Export Administration Regulations); DFARS (Defense Federal Acquisition Regulation Supplement); NIST SP 800-171 / CMMC cybersecurity; SOX compliance for NYSE listing; CAS (Cost Accounting Standards); FAR (Federal Acquisition Regulation); AS9100 aerospace quality management; NADCAP special process accreditation — all require structured AI governance that does not exist today.

2. Current State Architecture (As-Is)

The following describes Raytheon (RTX Corporation)'s current application architecture landscape across all major system clusters. This assessment illustrates the complexity, fragmentation, and tech debt that bidders must address.

2.1 Current Architecture Pain Points

Bidders must understand the following pain points in the current architecture and address them in their proposals:

System Cluster	Pain Points & Tech Debt
Trading & Pricing	Defense contract pricing (cost-plus, firm-fixed-price) relies on manual estimating. Commercial aftermarket pricing (Pratt & Whitney engine MRO) lacks dynamic optimization. Supply chain cost escalation forecasting manual.
CRM & Sales	Salesforce deployed but government/defense customer relationships managed through separate classified systems. Commercial aerospace customer (airline) account management disconnected from engine health data.
BPM & Workflow	Defense program management involves hundreds of WBS elements per contract. ITAR compliance workflows manual. Engineering change order (ECO) processes span multiple PLM systems. Government audit preparation resource-intensive.
HR & Workforce	185,000 employees across 30+ countries. 50,000+ require security clearances. Defense workforce planning constrained by clearance processing times. Engineering talent competition intense.
ERP & Finance	Multiple ERP instances from merger (UTC + Raytheon). Financial close 10+ business days. Defense contract accounting (earned value management, EVMS) complex. Government cost accounting standards (CAS) compliance manual.

OT & Process Control	500+ facilities with varied automation. Pratt & Whitney engine manufacturing requires micron-level precision. Missile assembly quality is safety-of-flight critical. Additive manufacturing quality assurance nascent. Cleanroom contamination monitoring reactive.
Process Engineering	Digital engineering transformation in progress. Model-based systems engineering (MBSE) not yet enterprise-wide. CFD/FEA simulation disconnected from manufacturing feedback. Design-for-manufacturability analysis manual.
Planning & Projects	Major defense programs span 10-20 years. Program schedule management in legacy tools. Supply chain disruption impact on program timelines poorly modeled.
IT Service & Analytics	500+ standalone applications. Classified and unclassified analytics environments completely separate. Engine health monitoring data (Pratt & Whitney) not integrated with enterprise analytics.
Standalone / Shadow IT	200+ standalone tools across three business segments and legacy companies.

2.2 Tech Debt Quantification

Bidders must propose a tech debt reduction strategy addressing the following estimated burden:

- 500+ applications — target rationalization to 120-180 core applications within 36 months
- 600+ custom programs across defense, engine, and avionics systems — assessment, rationalization, and AI-enablement strategy
- 62% of IT budget consumed by maintenance — target: reduce to 38% within 24 months, freeing $250M+ for innovation
- 200+ standalone/shadow IT tools — migration, retirement, or integration into enterprise platform
- Multiple SAP ECC and Oracle EBS instances from UTC-Raytheon merger — S/4HANA consolidation planned
- Salesforce disconnected from defense program management and engine health monitoring data — consolidation or integration strategy
- 250,000+ tags across 500+ facilities with classified/unclassified boundary challenges disconnected from enterprise AI

3. Enterprise AI Operating System Requirements

IMPORTANT: This section states requirements and expectations only. Bidders must include proposed solutions, technology recommendations, or directional guidance in their understanding of this section. The solution approach is the bidder's intellectual property and should be presented in their proposal response.

3.1 Functional Requirements by Domain

Raytheon (RTX Corporation) expects the EOS to transform decision-making across the following domains. For each domain, we state the problem and expected outcomes.

3.1.1 Manufacturing & Plant Operations

Problem Statement: 500+ facilities producing engines, missiles, avionics with extreme precision requirements. Pratt & Whitney GTF engine blade manufacturing requires single-digit micron tolerances. Missile assembly quality is flight-safety critical. Additive manufacturing for aerospace parts quality assurance still manual. Supply chain disruptions causing production delays.

Problem Statement: 500+ facilities producing engines, missiles, avionics with extreme precision requirements. Pratt & Whitney GTF engine blade manufacturing requires single-digit micron tolerances. Missile assembly quality is flight-safety critical. Additive manufacturing for aerospace parts quality assurance still manual. Supply chain disruptions causing production delays.

Expected Outcomes: Predictive quality reducing engine blade scrap by 30%. Missile assembly AI-assisted quality verification. Additive manufacturing real-time quality monitoring. Supply chain disruption impact prediction enabling proactive production replanning. 35% reduction in unplanned equipment downtime.

3.1.2 Supply Chain & Logistics

Problem Statement: Defense supply chain with 40,000+ suppliers, many sole-source. Post-pandemic supply chain disruptions ongoing. Rare material sourcing (titanium, cobalt) geopolitically sensitive. ITAR controls add compliance burden to every cross-border shipment. Engine aftermarket parts forecasting manual.

Problem Statement: Defense supply chain with 40,000+ suppliers, many sole-source. Post-pandemic supply chain disruptions ongoing. Rare material sourcing (titanium, cobalt) geopolitically sensitive. ITAR controls add compliance burden to every cross-border shipment. Engine aftermarket parts forecasting manual.

Expected Outcomes: AI-powered supply chain risk monitoring for 40,000+ suppliers. Rare material sourcing intelligence. ITAR compliance automation for cross-border logistics. Engine aftermarket demand prediction. Multi-tier supply chain visibility.

3.1.3 Commercial & Trading

Problem Statement: Defense contract pricing relies on manual cost estimation with limited competitive intelligence. Commercial aftermarket (engine MRO) pricing disconnected from engine health data. Cross-segment commercial opportunities (Collins + Pratt) not AI-identified.

Problem Statement: Defense contract pricing relies on manual cost estimation with limited competitive intelligence. Commercial aftermarket (engine MRO) pricing disconnected from engine health data. Cross-segment commercial opportunities (Collins + Pratt) not AI-identified.

Expected Outcomes: AI-augmented defense contract pricing improving win rates. Engine health data-driven MRO pricing optimization. Cross-segment commercial opportunity identification. Government contract profitability prediction.

3.1.4 Finance & Accounting

Problem Statement: Financial close across merged entities 10+ business days. Defense earned value management (EVMS) reporting manual. CAS (Cost Accounting Standards) compliance labor-intensive. Program estimate-at-completion (EAC) updates manual.

Problem Statement: Financial close across merged entities 10+ business days. Defense earned value management (EVMS) reporting manual. CAS (Cost Accounting Standards) compliance labor-intensive. Program estimate-at-completion (EAC) updates manual.

Expected Outcomes: Financial close reduced to 6 business days. AI-powered EVMS reporting. Automated CAS compliance monitoring. AI-driven EAC prediction for defense programs.

3.1.5 Human Resources & Safety

Problem Statement: 185,000 employees with 50,000+ requiring security clearances. Clearance processing bottleneck limits hiring. Engineering talent competition with big tech. Post-merger cultural integration across three segments.

Problem Statement: 185,000 employees with 50,000+ requiring security clearances. Clearance processing bottleneck limits hiring. Engineering talent competition with big tech. Post-merger cultural integration across three segments.

Expected Outcomes: AI-optimized clearance pipeline management. Engineering talent retention prediction. Post-merger cultural integration analytics. Workforce planning for defense program ramp-ups.

3.1.6 IT Operations & Cybersecurity

Problem Statement: 50,000+ support tickets per month. Classified/unclassified network boundary creates complexity. Nation-state cyber threats target defense IP. Post-merger IT consolidation ongoing.

Problem Statement: 50,000+ support tickets per month. Classified/unclassified network boundary creates complexity. Nation-state cyber threats target defense IP. Post-merger IT consolidation ongoing.

Expected Outcomes: 60% L1 ticket deflection. Classified-environment-compatible AI assistance. AI-powered threat detection for defense IP protection. Post-merger IT rationalization acceleration.

4. Architecture & Technical Depth Requirements

Bidders must provide detailed enterprise architecture diagrams showing all layers, data flows, integration points, and security boundaries. The following 6 architecture views are mandatory.

4.1 Mandatory Architecture Deliverables

#	Architecture View	What Bidders Must Show
1	**Current State (As-Is)**	Map of Raytheon (RTX Corporation)'s existing 500+ application landscape. Identify integration gaps, data silos, tech debt hotspots, and rationalization candidates.
2	**Future State (To-Be)**	Complete EOS architecture across all 7 layers (Infrastructure through Experience). Show how AI intelligence layer overlays and transforms the current landscape. Must address all 6 functional domains.
3	**Integration Architecture**	How EOS connects to SAP ECC 6.0 (multiple instances from legacy companies), Orac, DCS/MES across 500+ facilities, CNC machining centers, addit, and 200+ standalone apps. Show protocols, APIs, middleware, event-driven patterns.
4	**Data Architecture**	End-to-end data flow: DCS/MES across 500+ facilities, CNC machining cent → historians → data platform → AI models → applications. Transactional data integration. Master data governance. Data quality strategy.
5	**Security Architecture**	Zero-trust model for IT + OT environments. Data classification enforcement. IAM integration. OT security boundary. ITAR (International Traffic in Arms Regulations) compliance. AI model security.
6	**Deployment Architecture**	Hybrid deployment: on-premises, edge (at 500+ manufacturing and R&D facilities across 30+ countries), cloud. Show latency requirements for real-time manufacturing AI vs. batch analytics.

4.2 Transformation Pillars & Outcomes

Beyond technology deployment, Raytheon (RTX Corporation) requires bidders to address the following transformation pillars. Items marked [MANDATORY] are minimum requirements. Items marked [DIFFERENTIATOR] are opportunities to exceed expectations.

Pillar 1: Delivery & Governance

Strategic Steering Committee
• **[MANDATORY]** Composition: Monthly meeting chaired by Raytheon (RTX Corporation) CEO/COO + bidder Engagement Partner + CFO + CTO. Board-level authority for programme direction, budget reallocation, and escalation resolution. • **[MANDATORY]** Decision Rights: Documented RACI matrix. Steering Committee approves wave transitions, budget changes >5%, scope changes, and vendor additions/removals.

- **[DIFFERENTIATOR]** Strategic Value Reviews: Quarterly executive sessions connecting AI programme outcomes to Raytheon (RTX Corporation)'s strategic KPIs and stakeholder reporting requirements.

Programme Management Office

- **[MANDATORY]** PMO Cadence: Weekly PMO meetings with RAID log management. Bi-weekly delivery health reports. Monthly financial tracking (burn rate, forecast-at-completion, earned value).
- **[MANDATORY]** Milestone Gates: Each wave has defined entry/exit criteria with formal sign-off. No wave proceeds without Steering Committee approval. Gate review includes technical, commercial, and change readiness assessments.
- **[MANDATORY]** Model Deployment Gate: Every AI model entering production must pass formal review: accuracy metrics, bias testing, security validation, operational readiness, rollback plan, and owner assignment.

Delivery Health & Transparency

- **[MANDATORY]** Real-Time Dashboard: Programme health dashboard accessible 24/7 to Raytheon (RTX Corporation) leadership. Workstream RAG status, budget burn, resource utilization, risk register, value delivered to date.
- **[MANDATORY]** Outcome Measurement: Quarterly independent verification of outcome-based KPIs. Third-party auditor for financial outcomes.
- **[DIFFERENTIATOR]** AI-Powered PMO: Use AI to monitor programme health itself — predict delivery risks, flag resource bottlenecks, optimize sprint planning using historical velocity data.

Vendor & Ecosystem Governance

- **[MANDATORY]** Prime Contractor Model: Bidder is single point of accountability. Sub-contractors, platform vendors, and niche specialists governed under bidder's quality framework.
- **[MANDATORY]** IP & Data Governance: Clear IP ownership per contract terms. Data access governed by role-based permissions. All bidder personnel background-checked.

Pillar 2: Workshops

Discovery Workshops (Wave 0–1, Months 1–3)

- **[MANDATORY]** Process Mining: Conduct process discovery with all 6 functional domains. Document current-state workflows as they happen across Raytheon (RTX Corporation)'s operations globally.
- **[MANDATORY]** Use Case Backlog: Output: scored and ranked backlog of 100+ potential AI use cases with estimated business value ($), technical feasibility (H/M/L), implementation complexity (S/M/L/XL), and data readiness assessment.
- **[MANDATORY]** Language: Workshops must be conducted in English. Facilitators must understand aerospace/defense manufacturing/operations context.

Design Thinking Workshops

- **[MANDATORY]** User-Centric Design: For each prioritized use case, facilitate design thinking sessions with business users + technical teams together. Output: experience prototypes.
- **[DIFFERENTIATOR]** Operator Co-Design: Experienced aerospace/defense operators involved in designing AI interfaces. Their domain knowledge is captured and encoded into the AI, not replaced by it.

Architecture Workshops (Wave 1, Months 2–6)

- **[MANDATORY]** Joint Architecture: Technical deep dives with Raytheon (RTX Corporation)'s enterprise architecture, OT, and security teams. Output: jointly authored Architecture Decision Records (ADRs).
- **[MANDATORY]** OT Integration Sessions: Dedicated workshops with DCS engineers, process control administrators, and plant instrumentation teams.

Executive Alignment (Quarterly, Ongoing)

- **[MANDATORY]** Board-Level Sessions: Quarterly strategic sessions with Raytheon (RTX Corporation) C-suite. Strategic conversations about competitive positioning and next-wave investment decisions.
- **[DIFFERENTIATOR]** Stakeholder Briefings: Separate briefing sessions prepared for Raytheon (RTX Corporation)'s board and key stakeholders, tailored to strategic priorities.

Train-the-Trainer (Wave 2–3, Months 12–30)

- **[MANDATORY]** Capability Transfer: Formal programme where Raytheon (RTX Corporation)'s CoE team is trained to independently facilitate discovery workshops, design use cases, build models, and deploy to production.
- **[MANDATORY]** Certification: Internal AI practitioner certification for Raytheon (RTX Corporation) employees completing the programme. Minimum 50 certified AI practitioners by Month 30.

Pillar 3: Centre of Excellence (CoE)

The CoE is the mechanism through which Raytheon (RTX Corporation) becomes self-sufficient in AI.

Phase 1: Embedded (Months 1–12)

- **[MANDATORY]** Staffing: CoE staffed primarily by bidder (80%) with 2–3 Raytheon (RTX Corporation) secondees embedded from Day 1. Every model built, every decision made has a Raytheon (RTX Corporation) shadow.
- **[MANDATORY]** AI Playbook: By Month 12, publish Raytheon (RTX Corporation)'s internal AI Playbook: how AI projects are initiated, developed, tested, deployed, monitored, and retired.
- **[MANDATORY]** Standards: Establish AI development standards, model testing protocols, MLOps pipelines, and deployment playbooks specific to aerospace/defense context.

Phase 2: Hybrid (Months 13–24)

- **[MANDATORY]** Leadership Transition: CoE co-led by Raytheon (RTX Corporation) AI Director + bidder AI Lead. Ratio shifts to 60% Raytheon (RTX Corporation) / 40% bidder.
- **[MANDATORY]** Independent Delivery: By Month 24, CoE must have independently delivered at least 10 AI use cases into production without bidder-led development.
- **[DIFFERENTIATOR]** Internal AI Consulting: CoE begins serving as internal AI consulting function — business units bring problems to the CoE.

Phase 3: Independent (Months 25–36)

- **[MANDATORY]** Full Ownership: CoE fully Raytheon (RTX Corporation)-owned and operated. Bidder provides managed services but does not develop new use cases. 80%+ of operations run by internal team.

- **[MANDATORY]** Staffing Target: Minimum 15–20 internal CoE resources: AI/ML engineers, data engineers, product manager, change manager, AI ethics officer. All certified.
- **[MANDATORY]** Governance Role: CoE serves as AI governance body — approving models for production, monitoring for bias and drift, managing model registry, enforcing ethical AI standards.

Pillar 4: Advisory Component

Operating Model Design

- **[MANDATORY]** AI-Enabled Blueprint: Design future-state operating model for Raytheon (RTX Corporation): which decisions become AI-augmented, which roles evolve, which new roles emerge. Deliver AI-Enabled Operating Model Blueprint by Month 6, updated quarterly.
- **[DIFFERENTIATOR]** Industry Operating Model: Address Raytheon (RTX Corporation)'s specific governance and competitive challenges in designing the AI operating model.

Technology Roadmap

- **[MANDATORY]** 5-Year Perspective: Deliver annually updated Technology Futures Report specific to aerospace/defense.
- **[DIFFERENTIATOR]** Emerging Tech Scouting: Proactive identification of emerging technologies relevant to Raytheon (RTX Corporation)'s operations.

Organizational Design

- **[MANDATORY]** Role Evolution: Advisory must cover role elevation — how existing employees do higher-value work when AI handles routine. Co-designed with HR.
- **[MANDATORY]** Skills Gap Analysis: Map current workforce capabilities against AI-enabled operating model requirements.

Tech Debt Reduction Roadmap

- **[MANDATORY]** A structured plan to rationalize 500+ applications to 120-180 core systems, retire shadow IT, and modernize legacy integrations. Must include business case for each rationalization decision.

Competitive Intelligence

- **[DIFFERENTIATOR]** Industry Benchmarking: What are Raytheon (RTX Corporation)'s competitors doing with AI? Bidder brings cross-industry insight.

Board Readiness

- **[MANDATORY]** Executive Education: Prepare Raytheon (RTX Corporation)'s board for AI governance decisions. Board briefing materials, risk frameworks in board-ready language.
- **[DIFFERENTIATOR]** Board AI Dashboard: Real-time board-level AI dashboard showing enterprise AI adoption metrics, value delivered, risk posture, and strategic recommendations.

Pillar 5: Ethics, Risk & Compliance

AI Ethics Framework

- **[MANDATORY]** Responsible AI Policy: Establish comprehensive framework within first 90 days covering fairness, transparency, accountability, privacy, and safety. Co-designed with Raytheon (RTX Corporation) legal, compliance, HSE, and operations.
- **[MANDATORY]** Bias Monitoring: Continuous monitoring for bias in all HR, procurement, and commercial AI models. Quarterly fairness audits.

Tiered Risk Classification

- **[MANDATORY]** Tier 1 — Safety-Critical: AI influencing process control, maintenance decisions, safety systems. Full explainability, human approval, kill-switch, real-time monitoring.
- **[MANDATORY]** Tier 2 — Financial/Regulatory: AI affecting financial reporting, trading, compliance. Regulatory-grade audit trail, SOX-compatible logging.
- **[MANDATORY]** Tier 3 — Productivity/Advisory: AI providing non-critical recommendations. Basic logging, user feedback, periodic accuracy reviews.

Model Lifecycle Governance

- **[MANDATORY]** Model Registry: Centralized system tracking every model. Drift Detection: Automated monitoring. No model runs in production for >90 days without performance validation.

Regulatory Compliance

- **[MANDATORY]** Compliance Matrix: Map every applicable regulation to specific technical controls: ITAR (International Traffic in Arms Regulations), EAR (Export Administration Regulations), DFARS (Defense Federal Acquisition Regulation Supplement), NIST SP 800-171 / CMMC cybersecurity, and all other applicable standards. Evidence must be audit-testable.

AI Incident Response

- **[MANDATORY]** Incident Plan: Documented procedure for when AI makes a consequential error. Severity levels, escalation paths, model rollback, root cause analysis.
- **[MANDATORY]** Human Override: Every Tier 1 and Tier 2 AI system must have frictionless human override. Override patterns logged for model improvement.

Pillar 6: Change Management

Change Impact Assessment (Months 1–2)

- **[MANDATORY]** Workforce Impact: Before any AI deploys, document for every use case: who is affected, how daily workflow changes, what skills needed. Across 185,000+ direct; 60,000+ contractors.
- **[MANDATORY]** Stakeholder Mapping: Segment workforce into Champions, Pragmatists, Skeptics, Resistors. Each segment gets a different engagement strategy.

Operator-Centric Programme

- **[MANDATORY]** Co-Design with Operators: Experienced operators are the most important and most sceptical users. Change programme designed WITH them.
- **[MANDATORY]** Adoption Target: 80%+ of targeted users actively using AI tools within 6 months of deployment. Measured by decision quality metrics.

- **[DIFFERENTIATOR]** Reverse Mentoring: Pair junior digital-native employees with experienced operators.

Communication Strategy

- **[MANDATORY]** Multi-Channel: CEO town halls, floor-level sessions, digital channel, regular "AI Stories" case studies. From Day 1 through Month 36.
- **[MANDATORY]** All communications in English. Culturally appropriate for Raytheon (RTX Corporation)'s multi-national workforce.

Training & Upskilling

- **[MANDATORY]** Three-Level Programme: Level 1 — AI Awareness (all 185,000+ direct; 60,000+ contractors). Level 2 — AI User (primary users). Level 3 — AI Builder (CoE + power users, 50–100 people, multi-week certification).
- **[MANDATORY]** Ongoing: Training is continuous, not one-time. Refresher training quarterly. Effectiveness measured by competency assessments.

Adoption Metrics

- **[MANDATORY]** Beyond Login Counts: Measure decision quality improvement, time savings, user satisfaction (NPS), override rates.
- **[DIFFERENTIATOR]** Adoption Heatmap: Real-time visualization showing AI adoption across all 500+ manufacturing and R&D facilities across 30+ countries, all departments, all user segments.

5. Platform, Integration & Compliance Requirements

5.1 Platform Requirements

Bidders must propose their platform strategy. Raytheon (RTX Corporation) does not prescribe platform choice but expects bidders to justify their selection against these criteria:

- SAP integration depth (current SAP ECC 6.0 (multiple instances from legacy companies))
- OT/IoT convergence capability (OPC-UA, MQTT, historian integration)
- Agentic AI architecture support (multi-agent orchestration, not just chatbots)
- Aerospace/Defense domain models and pre-built accelerators
- On-premises + edge deployment for manufacturing latency requirements
- ITAR-controlled data must remain within US or approved allied nation facilities compliance
- Total cost of ownership over 5 years including the licensing model

5.2 SAP & Non-SAP Integration Requirements

5.2.1 SAP Integration

- SAP ECC 6.0 (multiple instances from legacy companies), Oracle EBS (Raytheon legacy), planned S/4HANA consolidation, SAP Ariba, ITAR-compliant procurement systems: Current state integration via BAPIs, IDocs, RFCs. Must not disrupt production operations.
- SAP S/4HANA: Future-proof architecture that supports migration.
- SAP Ariba: Procurement AI integrated with Ariba network
- SAP BTP: Leverage where appropriate (AI Core, Integration Suite)
- Custom programs (600+ custom programs across defense, engine, and avionics systems): Assessment and AI-enablement strategy

5.2.2 Non-SAP Integration

- PLM (Siemens Teamcenter: Integration or rationalization strategy
- PTC Windchill): Integration or rationalization strategy
- Salesforce CRM: Integration or rationalization strategy
- Workday HR: Integration or rationalization strategy
- ServiceNow ITSM: Integration or rationalization strategy
- custom defense program management tools: Integration or rationalization strategy
- classified networks (SIPR/JWICS): Integration or rationalization strategy
- 500+ standalone applications: Integration or rationalization strategy
- MES (Siemens: Integration or rationalization strategy
- Rockwell): Integration or rationalization strategy

5.3 Security & Compliance

- ITAR (International Traffic in Arms Regulations)
- EAR (Export Administration Regulations)
- DFARS (Defense Federal Acquisition Regulation Supplement)

- NIST SP 800-171 / CMMC cybersecurity
- SOX compliance for NYSE listing
- CAS (Cost Accounting Standards)
- FAR (Federal Acquisition Regulation)
- AS9100 aerospace quality management
- NADCAP special process accreditation
- ITAR-controlled data must remain within US or approved allied nation facilities. Classified data per DoD requirements. EU data subject to GDPR. CMMC compliance mandatory for all defense data.

5.4 Risk Management & Governance

Bidders must include a comprehensive risk management framework:

- Minimum 25 identified risks with mitigation strategies and residual risk ratings
- Safety-critical AI governance: tiered approval for advisory vs. decision-support vs. autonomous AI
- Model lifecycle management: development, testing, deployment, monitoring, retraining, retirement
- Human override and kill-switch requirements for all safety-related AI
- AI incident response plan: procedure when AI makes a consequential error
- Change management strategy for 185,000+ direct; 60,000+ contractors

5.5 AI Strategy

Bidders must articulate their AI strategy for Raytheon (RTX Corporation), including multi-agent orchestration across functional domains, autonomous decision-making boundaries, and human-in-the-loop governance for safety-critical operations.

6. Pricing, Commercial Model & ROI Expectations

6.1 Contract Value & Pricing Structure

Bidders must propose a hybrid pricing model:

Platform & Infrastructure	Transparent licensing. Ability to switch platforms at Yearly review.
Outcome-Based Fee & Contract Terms	The complete contract should be tied to measurable KPIs. Bidders propose the KPIs and measurement methodology to Financial & Balance Sheet Business & Outcome Metrics.
Managed Services	24/7 support. SLA-backed. Continuous improvement built-in the model itself.
Innovation Fund	Quarterly governed. Robotics, AR/VR, experimental and Responsible AI.

6.2 ROI Expectations

Bidders must demonstrate clear business value:

- **Revenue Growth Path:** Show how AI-driven capabilities create new revenue streams, improve product quality premiums, and enable market expansion.
- **Cost Optimization:** Demonstrate % of savings in Topline or Bottomline in cumulative savings over 5 years through downtime reduction, energy efficiency, procurement optimization, and workforce productivity.
- Payback period should be clearly demonstrated
- NPV analysis with clear discount rates and clearly stated assumptions
- Sensitivity analysis: pessimistic (60%), baseline (100%), optimistic (140%)

7. Innovation & Technology Demonstration

7.1 Orals & Defense Day Format

The Kaar Infinite Orals and Defense Event Day (April 18, 2026 — ALM Summit, 2:00–6:00 PM, In-Person India) is the critical evaluation milestone. Each bidder receives:

Segment	Duration	Evaluation Focus
Executive Pitch	3 min	Enterprise OS vision, understanding of Raytheon (RTX Corporation), business value proposition, team quality, differentiation
Live Demo	4 min	Working AI inference on proposed platform. Must show aerospace/defense use case. Before vs. After narrative. Agent orchestration.
Demo Video (Pre-submitted)	1 min	Innovation showcase: robotics, AR/VR, Meta Glasses, wearables. Submitted 7 days before event.
Q&A with Evaluation Board	1.5 min	Open questions on technical depth, pricing defense, risk awareness, honesty about limitations, team cohesion

7.2 Innovation Elements

Technology	Application in Aerospace/Defense (Illustrative)
Robotics	Autonomous inspection, warehouse automation, hazardous area inspection, tank/pipe crawling
AR/VR Headsets	Maintenance guidance overlay, planning visualization, digital twin immersion, operator training
Meta Glasses / Smart Glasses	Hands-free field rounds, real-time AI coaching for operators, safety compliance monitoring
Wearables / IoT	Operator fatigue monitoring, environmental sensors, quality monitoring
Computer Vision (Live)	Flare monitoring, corrosion detection, PPE compliance, loading dock automation
Voice / Multimodal AI	Voice-commanded SAP queries, multimodal process log analysis, field equipment voice reporting

8. Evaluation Criteria & Committee

8.1 Evaluation Committee

Role	Responsibility
Committee Chair — VP Procurement	Process governance, commercial fairness, conflict management
CTO — Chief Technology Officer	Architecture, platform, scalability, security, tech debt strategy
COO — Chief Operating Officer	Aerospace/Defense AI viability, operational impact, safety
CDO — Chief Data Officer	AI strategy, data quality, agent architecture, MLOps maturity
CFO — Chief Financial Officer	Pricing credibility, ROI model, outcome-based structure, TCO
VP Operations	Plant-floor applicability, DCS/MES across 500+ facilities integration, operator experience
VP Supply Chain	Logistics AI, demand forecasting, route optimization viability
External: Independent AI Assessor	Technical AI evaluation, architecture review, innovation assessment

8.2 Evaluation Details

70%

Board of Directors

Jury

Business acumen, pitch quality, demo impact, Q&A handling, innovation, conviction

10%

People's Choice

200+ live audience

Crowd energy, demo excitement, which team would you fund?

10%

Participation Metrics

Participation in Preparation calls, Mentor Scoring, Organizers Scoring, Platform Interaction and contribution to TP, CP & Artifacts, Attendance in Orientation calls

10%

AI Agent Evaluator

A Live Agent that will evaluate right from pre-event to defense day deliverables

Category	Weight	Sub-Criteria
Technical Proposal	40%	Architecture quality (12%), AI strategy (8%), SAP/Non-SAP integration (7%), OT convergence (5%), implementation approach (5%), staffing (3%)
Commercial Proposal	5%	Quote Building Costing Sheet Total cost credibility (8%), outcome-based structure (7%), pricing flexibility (5%), risk allocation (5%)
Innovation & Demo	10%	Live demo quality (8%), demo video innovation (5%), vision & creativity (4%), demo narrative (3%)
References & Credentials	10%	Chemical/energy sector references (4%), AI at scale references (3%), client testimonials (3%)
Team & People	5%	Named resource quality (2%), cultural fit (1.5%), knowledge transfer plan (1.5%)
Participation & Defense Day	30%	Effectiveness of Defense Day Presentation Time Promptness Method of Presentation Stage Participation of all Teammates

9. RFP Timeline & Submission via Kaar Infinite Portal

9.1 RFP Timeline

The Portal will have the deadlines mentioned for submission

9.2 Kaar Infinite Portal — Submission Guidelines

ALL submissions are digital-only via the Kaar Infinite Portal.

9.2.1 Portal Submission Structure

Submission Slot	Content	Format
Technical Proposal	Volume 1: Complete technical response (Sections 1–10)	PDF, max 50 pages
Commercial Proposal	Volume 2: Pricing model + commercial terms	PDF + Excel model
Architecture Diagrams	All 6 mandatory architecture views (high-resolution)	PNG/PDF per diagram
Demo Video	Pre-recorded innovation & technology demonstration	MP4, max 10 minutes
Case Studies & References	Minimum 3 relevant project references with outcomes	PDF
Team Profiles	CVs for all 20+ named roles with certifications	PDF
Artifacts & Appendices	Glossary, certifications, legal documents	PDF
NDA Confirmation	Signed NDA for all proposal team members	PDF (signed)

9.2.2 Portal Features

- Secure login with MFA for each registered proposal team member
- Real-time submission tracker showing upload status for each slot
- Automated completeness check — Portal flags missing mandatory deliverables
- Version control — bidders can re-upload until deadline (latest version evaluated)
- Clarification Q&A module — submit and receive clarifications within Portal
- Leaderboard (post-evaluation) — scores revealed on Orals & Defense Day
- Live scoring during Orals — committee scores captured in Portal in real-time

9.2.3 Submission Rules

- Portal closes automatically for all submission at 11:59 PM IST on April 15, 2026. No exceptions.
- Incomplete submissions will be flagged but not auto rejected.
- File naming: [BidderName]_MSK-EOS-EOS_[SlotName]_v[X].pdf

- All content must be in English.
- Proposals must not exceed 50 pages (Volume 1). Appendices unlimited.

10. Legal & Contractual Framework

10.1 Governing Law

Laws of the State of Delaware, United States. Disputes resolved through AAA arbitration seated in Arlington, VA.

10.2 Intellectual Property

- AI models trained on Raytheon (RTX Corporation) data: owned by Raytheon (RTX Corporation)
- Bidder pre-existing IP: retained by bidder with perpetual license to Raytheon (RTX Corporation)
- Joint innovations: negotiated on case-by-case basis
- Open-source components: must be disclosed and approved

10.3 Data Sovereignty

- ITAR-controlled data must remain within US or approved allied nation facilities. Classified data per DoD requirements. EU data subject to GDPR. CMMC compliance mandatory for all defense data.
- No cross-border data transfer without written CPO + CTO approval
- Compliance with all applicable data protection laws across operating jurisdictions

10.4 Liability & Insurance

- Professional indemnity: minimum $$100M per occurrence
- Cyber liability: minimum $$80M per occurrence
- General liability: minimum $$50M per occurrence
- Defense contractor liability; aviation product liability (Pratt & Whitney); government contract compliance surety
